

NORMECA Forensic Centers

Rapid fabrication of mortuary and forensic centers

Mortuary and forensic response systems are available for rapid deployment anywhere in the world following disaster. Within weeks of the tsunami hitting South-East Asia, these systems and associated infrastructure were installed in Thailand, establishing and operating the Victim Identification Center.

Within three days of receiving approval, a container-based medical forensic center was delivered in Thailand, using flat-pack containers and other equipment. Once clearance for construction was obtained, all the necessary infrastructure was constructed, including roads, water, sewage and electricity. Within days, we arranged more than 300 truckloads of debris removal to construct a new 300 meter road for heavy vehicles. More than 4,000 meters of water pipes were put in place, with two-8,000 liter tanks for spill water from the work lines and sewer tanks established.

Brondolo Associates can provide immediate information on these mobile hospitals and other services following a disaster.
