

NORMECA Mobile Hospitals

Scalable, expandable container hospitals on semi-trailers

These mobile hospital systems are delivered by semi-trailers and expand as modular units to provide the space for all hospital functions. Each module can connect with adjacent trailers to form a closed, scalable system for use anywhere with roads. They can be delivered within hours of a request and, once arrived in the field, can be expanded and set up within minutes.

These mobile hospitals have been delivered for both emergency preparedness and post-disaster contexts. The former includes two mobile, wheel-based hospital systems delivered to Saudi Arabia's Ministry of Finance in 2008, each consisting of 7 inter-locking semi-trailers. Each hospital was customized to include an emergency room, operating room, examination room, lab, bathroom facilities, and wards. Similar systems were developed for post-conflict Albania and Kosovo, in 1999.

Brondolo Associates can provide immediate information on these mobile hospitals and other services following a disaster.
